

Chatbot Steve

Steve Chatbot is a C program designed to have a conversation with you. He runs inside your terminal. Steve, currently, is not an app with a visual interface.

Steve, a human-like chatbot designed to have conversations.

Installation

Linux/other operating systems

1. Go to my [website](#) or my [GitHub page](#) to download the .c file
2. Use a compiler like GCC to compile the .c file
3. Type `cd [the path to the .c file]` Note: replace [the path to the .c file] with the path to chatbot.c
4. Type `gcc chatbot.c`
5. Type `./a.out` to run Steve

How to install GCC (Linux)

1. Open your terminal
2. Note: in the terminal always type return (enter) after each command
3. Type in the following command: `sudo apt-get install gcc`
4. If prompted to type in your account password do so
5. If you get a conformation y/n question telling you how much storage it will take, type `y`, if you are ok with the amount of storage it will take, else type `n`

MacOS

1. Go to my [website](#) or my [GitHub page](#) to download the .zip file
2. Extract it
3. Run the executable inside

Windows

1. Go to my [website](#) or my [GitHub page](#) to download the .exe installer
2. Your browser or Windows might warn you when downloading, but if you trust Steve chatbot, you can ignore these (in your browser click the arrow then keep or resume. Or more info then keep or run anyway)
3. After downloading the file, right-click it and click properties
4. Check the box that says unblock then click OK
5. Run setup.exe and proceed with the steps on your screen

Uninstalling

Linux/other operating systems

1. Delete the .a.out and .c files

Uninstalling GCC (Linux)

1. Open the terminal
2. Note: you have to type enter after every command in the terminal
3. Type `sudo apt-get remove gcc`
4. If prompted type your account password

MacOS

1. Delete the .zip file you downloaded
2. Delete all files extracted from the .zip file

Windows

1. Open Control Panel
2. Click view by Category
3. Click Uninstall a program
4. Find Steve Chatbot and click uninstall
5. Confirm that you want to uninstall
6. You will get a message when Steve Chatbot was successfully uninstalled

Help

You can ask questions to Steve in three different ways: (in this example I will use the question "What is your name")

1. "What is your name?"
2. "What is your name"
3. "what is your name?"
4. "what is your name"

Notice the difference in capitalization and punctuation in the examples above

If Steve is not working properly you can force quit him by pressing `ctrl+z` or just quitting the application your running him on (for example a terminal)

To normally quit Steve just say "Bye" and Steve will quit

Steve can currently only respond to a few questions which have programmed responses because he does not use artificial intelligence to answer

If you have feedback on Steve please submit it [here](#)

Images

```
Hi! Nice to meet you! What's your name?
Rishaan
Hello Rishaan
TIP: try asking Steve questions like 'What is your favorite food?' to have a conversation with him'

How are you doing?
Good
Cool, I'm doing good
What are your hobbies
I occasionally like to draw and paint and I like art. What are your hobbies?
coding
I don't really like coding
What color do you like
Sorry I didn't get that! Could you rephrase your sentence?
What is your favorite color
I like orange. What color do you color like?
Blue
I also like Blue.
Goodbye_
```

Steve chatbot Edit

Latest release v1.0 7b0f8e5 Verified Compare

rishaank released this 19 days ago

Removed an unnecessary command/question Steve can respond to.
